

GEMINI SPREAD & CUT PLANNER

Software application for automatic planning

Gemini Spread & Cut Planner is the software application for planning the spreading and cutting operations.

It provides a fast and high-quality automatic or interactive optimized planning, based on real production parameters, being the link between the design room and the cutting room.

- The application can be used for any type of spreading (tubular fabrics, folded or face to face), regardless of the complexity of the order (number of products, fabrics, technical parameters, etc.).
- It generates the Order Planning Report, with all the needed information for spreading and cutting operations, including important details for next production stages.
- As communication benefits, it includes native file converters from other CAD systems and it exports data for a wide range of plotters and cutters, as HPGL, ISO-CUT and RS274d files.

GEMINI SPREAD & CUT PLANNER

HIGH UTILITY AND FLEXIBILITY - it generates the planning and creates the markers at the same time; it can generate multiple planning variants, can manage multiple fabrics, allows the user to choose the preferred criteria for planning etc.

BEST USER EXPERIENCE - is an easy to use application, offering speed, good ergonomics, instant results; it generates automatic & fast planning for cutting an order, by entering only the order details and a minimal set of cutting room parameters.

MULTIPLE INTEGRATION BENEFITS

- 
- is available with files converters included and can import native and standard files;
 - the final SCP report is an important tool for the cutting room operations, for further product manufacturing (sewing, assembling etc.) and added operations (like costing, purchasing, warehouse);
 - integration with ERP systems using OTX open format is also available.
